WOODI

WOODI 01-2018

Functional learning environments can be accomplished with Woodi furniture

Woodi furniture makes diverse and adaptable learning environments possible, where children can develop and learn to interact with other people. With the right furniture, daily learning situations can expand into all nearby spaces, such as communal rooms, classrooms, corridors and halls. A range of tables equipped with wheels, adjustable chairs and transportable storage and play furniture can be used to achieve a flexible and varied space, which can be used by groups of different sizes, using a variety of teaching approaches.

Woodi furniture is safe and ergonomic, and it can be used to create an environment, that inspires and encourages learning. Solid birch is an ecological material for furniture, and it creates a comfortable and warm atmosphere.

Acoustics have been taken into consideration in the development of Woodi furniture in many ways. Tabletops, back panels of storage units, room dividers and cushion walls are available in Acoustic materials. With these elements, learning environments can be quickly and easily adapted to support work done independently and in teams.

Furniture that directs and encourages play can be placed around the kindergarten. Even corridors can be transformed into active learning environments. Versatile play furniture encourages children to take part in both spontaneous and supervised play. Because the play furniture is equipped with wheels, it can easily be moved to different spaces.

The early childhood education manager for the City of Alajärvi talks about working with Woodi on a kindergarten project

on page 88

Lobbies and hallways

Furniture that directs and encourages play can be placed around the kindergarten. Even corridors and halls can be transformed into active learning environments.

Small groups and sleeping areas

Children can be motivated to take part in exercise and to experience the joy of movement by adding different types of activating furniture around the kindergarten. This way, they can be encouraged to engage in active games indoors as well as out.

Toys and other equipment are within easy reach in child-sized storage and play furniture. Children also learn about hygiene and enjoying a clean environment, when it is easy to put equipment away.

Small groups

Versatile play furniture encourages children to get involved in spontaneous and supervised play. As children, we learn about the world around us through daily activities and play.

The furnishings of a functional kindergarten are designed to offer opportunities to for pleasant activities, versatile and energetic sports, games and peaceful rest.

Communal room for 12-15 children

Woodi furniture can be used to create versatile and adaptable learning environments for both early years education and schools. Children will develop and learn through interacting in modern learning environments.

Communal room for 21-24 children

A range of tables equipped with wheels, adjustable chairs, and mobile storage and play furniture can be used to achieve a flexible and varied space, which can be used by groups of different sizes, using a variety of teaching approaches.

An example of a layout for a kindergarten

The groups of tables can easily be changed when the tables are equipped with wheels.

Page 28

Five seats can be added to the communal room with a handy fold-out table.

Page 30

Toys and other equipment are within easy reach in child-sized storage and play furniture. Children also learn about hygiene and enjoying a clean environment when it is easy to put equipment away.

Page 34

Every child can be a gardener with growing trolleys. For example, children can grow herbs and use them to spice up their lunches. Growing trolleys work as a beautiful interior element as well.

Page 45

There is a great variety of Woodi furniture, that creates suitable platforms for play. For example, there is a lot of space for toys in the toy boxes that are situated beneath the Woodi bench. The bench can be used as a platform for play.

Page 46

This activity table can also be used as a handy research table. Rocks, pinecones and moss can be collected from outside in the boxes, and research can continue with a magnifying glass on the table.

Page 47

Through play, children learn skills that they will need as adults, and they are empowered through role play. Thanks to the wheels in the trolley, role play can be easily moved to the hallway, and the handy mirror travels along with it.

Page 52

Today, children start to learn about IT at kindergarten. It's easy and safe to recharge tablets and other devices in the charging station. A box full of tablets can be easily removed from the furniture and taken wherever they are needed.

Page 49

Children can train their visual perception with sensory walls by moving their finger along the lines as part of different exercises. Solid birch is a warm and natural material to touch.

Page 60

Ball games, hide and seek, even an energetic game of tag is possible with the exercise castle and anti-slip stands. Moreover, the best thing is that play can be easily transported to another space.

Page 61

Exercise furniture is flexibly placed around the kindergarten so that the corridors can also be used throughout the day. The furniture encourages children to move spontaneously in transitional situations and during playtime. It has been established that climbing and balancing improves memory and other cognitive functions, because exercises that use proprioception also use memory actively.

Page 62

Furniture for dining rooms

Our dining room tables are normally 730 mm high. The chairs for children are equipped with an elevated seat; hence the seat height is 500 mm. Some of the children's chairs are equipped with armrests and safety rails so that the dining room can be used by children of different ages. The chairs do not have dirt-accumulating gaps and they can be hung underneath tables to make cleaning easier. The tabletops are coated with high-pressure laminate or Acoustic-coating.

Acoustics

The acoustics of the space can be improved with room dividers equipped with wheels. The acoustic panels can also be used as a bulletin board, on which drawings and information can be attached with pins. Acoustic dividers make the space more multifunctional because they can be used to divide the room into smaller spaces. An Acoustic high room divider can be attached to a storage unit. With these great acoustic elements, a dining room can be transformed into an active space for the whole day.

It is easy to enjoy a dining space that is functional. When a kindergarten has its own dining room, communal rooms can be burdened with fewer tables, releasing more floor space for group activities, play furniture and play.

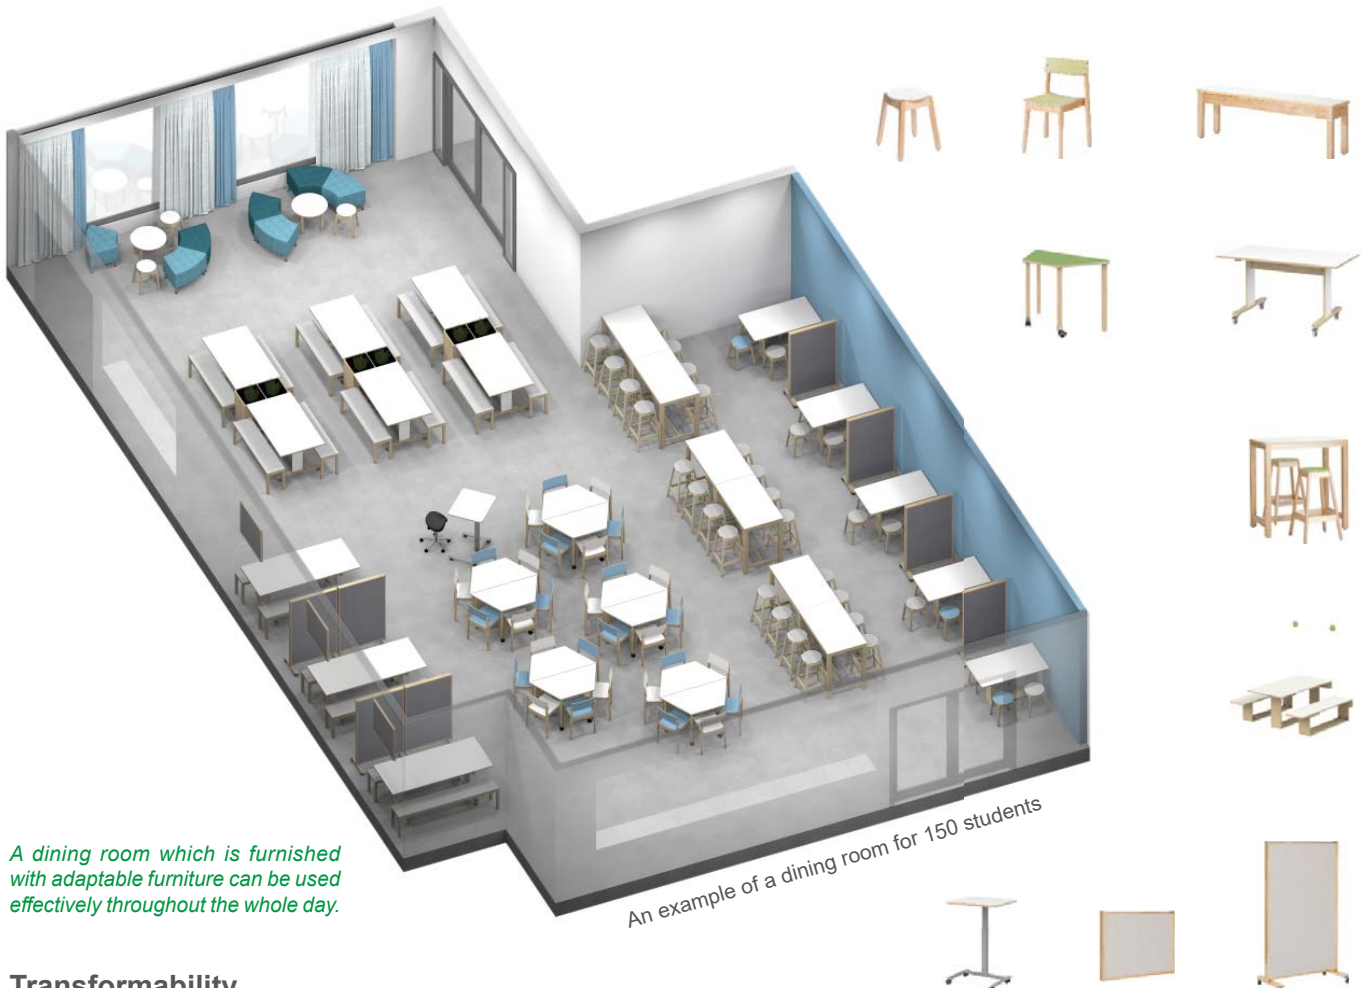

Transformability

The multi-functionality of the space can be enhanced with different pieces of small group furniture. The stand bench set can be adapted to create a stand for presentations or a relaxed place for reading in a flash. Other handy furniture includes activity tables and benches with toy boxes, so that the materials and toys used in play are always close to hand. A charging station for tablets can be a staple in a dining room, so that the room works as the technology hub for the kindergarten.

Furniture for dining rooms

The dining room tables are of different heights, which brings variability to the space. Chairs and stools can be hung underneath the tabletops, which are coated with high-pressure laminate or acoustic and hygienic Acoustic coating. A leaf of the tables can be folded against the wall to free up floor space for other activities. The tables in the middle of the room can be easily moved to the edges, as they are equipped with lockable wheels.

A dining room which is furnished with adaptable furniture can be used effectively throughout the whole day.

An example of a dining room for 150 students

Transformability

In a transformable dining room, the space has been separated with room dividers, equipped with wheels. The room dividers can be used to divide the space to smaller and more peaceful spaces. This way, the room dividers can be used to take into account the individual needs of the students. Acoustic boards on the walls and room dividers improve the acoustics of the space efficiently. A higher seat height (500 mm) should be taken into consideration in community centres, which have a kindergarten. This way, the space can be made ergonomic to everyone who uses the space.

A sporty school day is not just about physical education.

Furniture solutions can be used to increase children's daily movement. Furniture that encourages exercise can be placed in halls, corridors and classrooms. Different kinds of furniture that encourage to movement, such as sensory learning walls, rope climbing and climbing walls, gymnastic walls, slides and pull-up poles can be used by children to develop their sporty skills in a fun way.

For children, walking, running, jumping and climbing are natural ways to move. Furniture that guides children to climb and encourages them to move spontaneously will help them to develop. Sports mats placed beneath the climbing areas make the activity safe. The sensory learning walls have different kinds of climbing elements: a net, climbing boulders and a climbing pole. A climbing net is a challenging platform for children because it bends under the child's weight while they are climbing. This way, the child's balancing skills and proprioception develop while climbing. In the same way, the child's body control and strength increases while climbing on boulders and the pole.

Climbing develops children's problem solving skills and concentration because when climbing, the child has to focus on the task at hand, such as how you get down from the net. While climbing, children also learn to handle disappointment and to develop courage. Good body control is a requirement for reading, writing and mathematical thinking, so climbing will help to develop a good basis for learning. Movement will encourage cell production in the brain, which is necessary for learning.

Different working methods and learning environments are utilised in development and teaching work, and teachers are encouraged to take their work outside the classroom on a regular basis. Syllabus basics 2016

Staff break rooms are places where teachers can relax and exchange thoughts with their colleagues

In the new learning environment, adults are also being freed from having to sit all day. Break rooms are equipped with height-adjustable workstations, and the furnishings are designed to create a cosy and harmonious space. There are sofa and table groups in different sizes instead of one long meeting table. High tables with high stools bring variation and if the space allows it, a few graceful rocking chairs can be added. Workstations are height-adjustable electrically or with gas-assisted springs, and are equipped with saddle chairs.

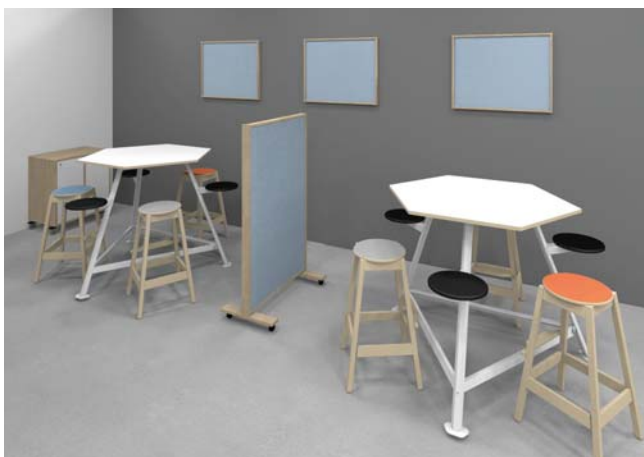

It is important to take into consideration the acoustics of the space in open learning environments, because there can be different kinds of activities going on at the same time with different groups.

Acoustics have been taken into consideration in many ways with Woodi furniture. Tabletops, back panels of storage units, different acoustic screens and boards can be used to reduce noise. This way, the open learning environment can be transformed into different spaces for individual and group activities, in which everyone has a possibility to take part in the interaction.

Pedagogically flexible space is easy to divide into groups of different sizes and learning can happen individually, in pairs or in bigger groups. By moving a couple of pieces of furniture, the space can be transformed into one large communal room. Tables and storage units, that are equipped with wheels, enable easy convertibility. In addition, the height-adjustable workstations for teachers are also equipped with wheels. The furniture in the space enables people to work standing up, sitting down or even relaxing on the soft furnishings alone or with others.

The space can be used to execute different kinds of activities, and the furniture supports modern learning and teaching methods that encourage both individuality and communality. The open learning space is cosy, ergonomic, unobstructed and aesthetically pleasing, where students and staff can enjoy themselves.

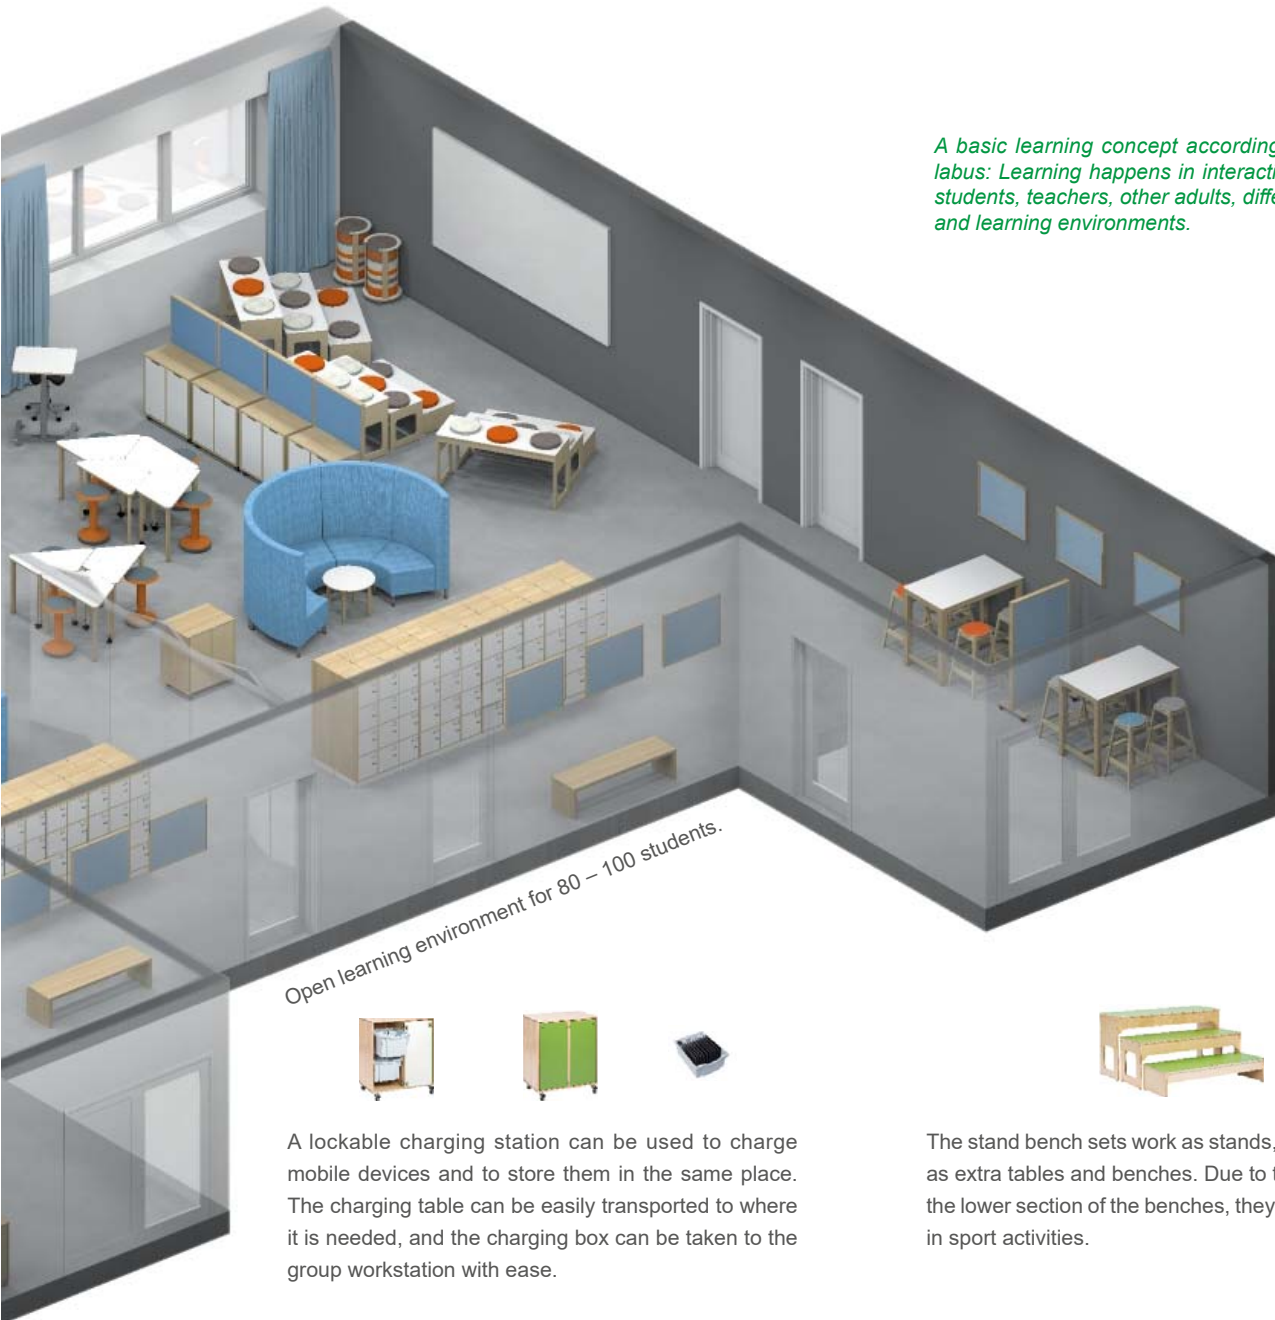

There is a great variety of seats: soft and hard, high and low, adjustable and active.

The student desks are specially designed for learning environments. The tables can be used individually or they can be combined to create groups of different sizes. Due to the wheels, the tables are easy to move from one place to another.

A basic learning concept according to the 2016 syllabus: Learning happens in interaction between other students, teachers, other adults, different communities and learning environments.

Open learning environment for 80 – 100 students.

A lockable charging station can be used to charge mobile devices and to store them in the same place. The charging table can be easily transported to where it is needed, and the charging box can be taken to the group workstation with ease.

The stand bench sets work as stands, stages and even as extra tables and benches. Due to the crawl holes in the lower section of the benches, they can also be used in sport activities.

The Heksa table has three sitting and three standing spots around it. The tabletop is coated with white board, so it can be used to jot down the results of group work.

It is easy to take a floor cushion from the cushion cart and sit wherever you want.

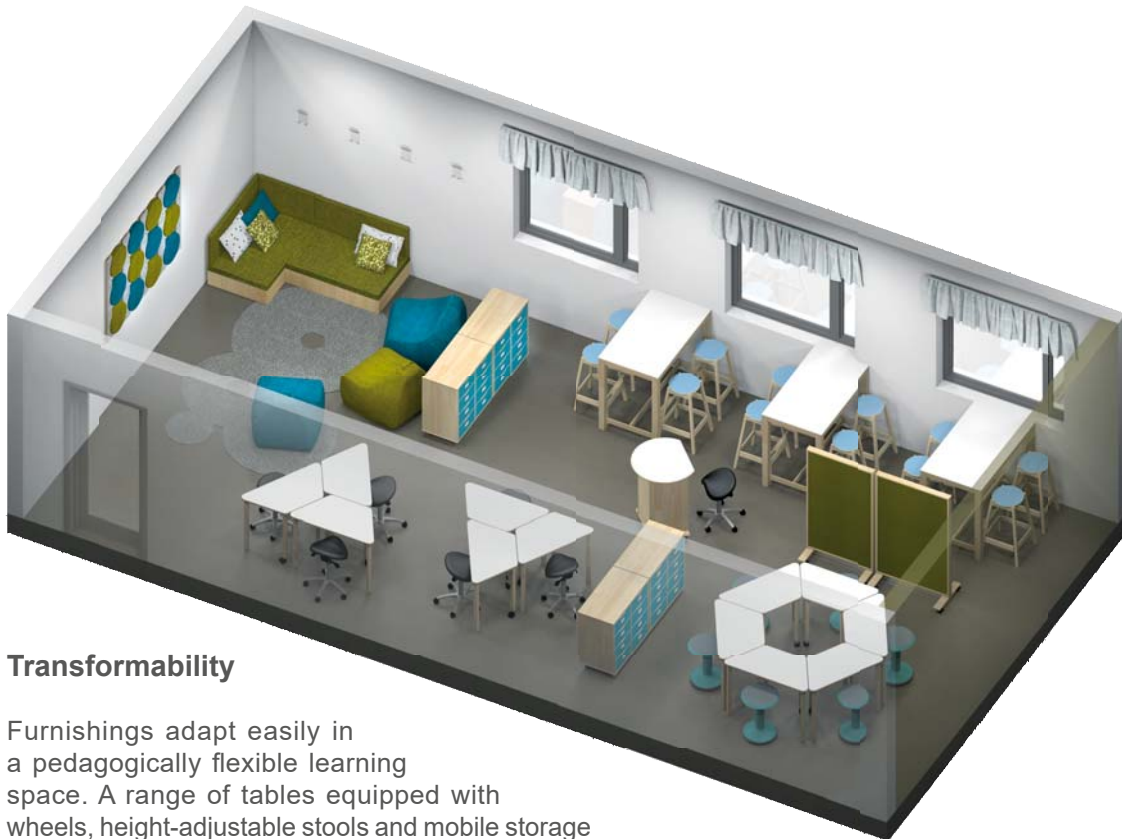

Storage units are equipped with high acoustic backboards and they can be used to confine the space. The units are equipped with wheels so they are easy to move around, and at the same time the necessary equipment can be moved on board.

Sofas with high acoustic backrests improve the acoustics of the space and create a more peaceful learning environment in the middle of a larger space. Due to their wheels, the soft seats are easy to move and there is plenty of storage space under the lids.

Transformability

Furnishings adapt easily in a pedagogically flexible learning space. A range of tables equipped with wheels, height-adjustable stools and mobile storage units can be used to transform a space seamlessly. Spaces can be used in different ways, enabling the use of different kinds of learning and teaching methods.

The space has high furniture, which can be used to work while standing or sitting down. Convertible tables allow work to be performed individually or in groups of different sizes. Students can retreat to work in a more relaxed area where there is soft furnishings, such as bean bags, sofas and floor cushions. The acoustics of the space have been taken into consideration in many ways. The upholstered surfaces of the cushion walls and the storage units, the soft furnishings, the carpet and the Acoustic coating on the tables all work as acoustic elements in the space. There is an easily transportable standing workstation for the teacher, which is equipped with lockable storage space.

“The colour palette for the classes has been inspired by the primary colours. This way we can teach children how different colours can be created. Two basic colour tables can be combined, and cardboard in the shade that those colours create can be added in between. The students can also be easily divided into groups of different colour. The look of the rooms give energy. The tables and the chairs can be mixed and matched according to colour palette. The cabinets act as the “sun” of the classroom during the dark winters. The teacher’s furniture is all green. The more muted greyscale palette of the bench sets makes the room calmer. The multiple colours of the drawers can be used to learn colours in different languages, for example, and they work as colourful points of focus on both sides of the classroom as well. ”

High chair developed in cooperation with kindergartens

The High Otto chair is strong and stable. The frame is made of high-quality lacquered solid birch. The seat and the backrest comes in solid birch or birch plywood coated with high-pressure laminate. The high backrest provides optimal sitting comfort. Children and adults can easily move the Otto chair by using the hole in the back of the chair as a handle. The width of the front legs has been made as narrow as possible (380 mm) to enable the placing of the chair under the table. This also helps children to get on to the chair. The back legs are spread slightly in order to make the chair as safe as possible. When hung for storage, the Otto chair takes up minimal space and makes cleaning easy. There are no dirt-accumulating gaps in the seat or the backrest.

LK31 Exercise castle

The exercise castle can be utilised in play and exercise circuits. You can peek, crawl and throw a ball through the holes. The walls of the castle are attached to each other with hinges and the furniture can be folded flat for storage. A locking mechanism keeps the walls in place securely when the furniture is open, which makes the castle safe and sturdy to use. The castle is compatible with the stands, which are sold separately.

Materials:

The frame is birch plywood coated with high-pressure laminate. Primary colours. There is hinges and a locking mechanism, which locks the wall open. Screw-in anti-slip studs as standard.

Size of a mirror

AS30 Funhouse mirror set

Materials:

Lacquered solid birch frames. Distorting mirrors, three different models. The mirrors are made of plastic and are hung with concealed fastenings

LK20 Stand

LK21 Slide

LK22 Stairs

Materials:

Lacquered plywood frame, the top is coated with Acoustic coating. Primary colours.

LK20

LK21

LK22

LK25 Trolley for stands

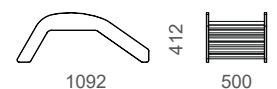

Materials:

Lacquered solid birch frame, the bottom of the trolley is made of birch plywood. Lockable wheels.

KS20 Motor skills arc

KS21 Mat for the arc

Materials:

Lacquered solid birch bars, birch plywood sides. Mat comes as an optional extra, upholstered with Enstex fabric. Primary colours of red, green, blue and yellow. There is an attachment mechanism at the end of the mat, which can be used to attach the mat to the bars.

The climbing area underneath the climbing and motor skills walls (about 2 m) has to be designed so that there is no risk of children hurting themselves if they fall. It is recommended that the floor of the climbing area is equipped with mats.

KS1 + KS2 + KS3 Climbing wall

KS5 Climbing wall, low

Materials:

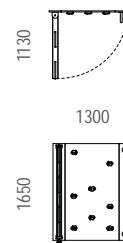

The climbing wall is made of 18 mm birch plywood, and it is attached to the wall. The boulders are plastic, and are shaped so that it is easy for a child to use them as a support when climbing. The weight limit is 80 kg.

KS11 Rope climbing wall

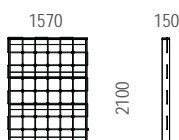

KS10 Motor skills wall

KS12 Safety board to prevent climbing

Materials:

Rope net., The frame is made of lacquered birch plywood. Must be attached to a sturdy, weight-bearing wall.

Materials:

18 mm lacquered birch plywood backboard, which is attached to the wall. The boulders are plastic, the pole is painted steel, colour RAL 7042 grey. Rope net. The net element can be opened and closed with hinges and it locks to it is place with safety locks. The backboard has to be attached to a sturdy and bearing wall. The weight limit is 50 kg. Safety board to prevent climbing comes as an optional extra.

VP1 Gymnastic mat,
flodable 1400 x 700 x 70 mm

WOODI

For people

~ naturally durable

Woodi collections

Birch

Woodi furniture is made of solid birch and the material is classified as the highest quality (A/A). According to the classification, the surface has to be branchless and balanced in colour.

We use finger joint glue boards. This enables the best quality and balances any alterations in the surface.

Due to the solid birch we use, Woodi furniture is long-lasting and stays in good condition for many years.

Lacquer

Maintenance for lacquered wood

Woodi products are treated with high-quality Nicolet furniture lacquer. Although the wooden surface is durable, it is a good idea to remember the following instructions when cleaning and maintaining the furniture.

- 1) Moisture damages lacquered surfaces. Always remove water and other liquids immediately from wooden surfaces.
- 2) A lacquered surface can be cleaned with a slightly damp cloth. Abrasive cleaning tools should be avoided.
- 3) Use very mild cleaning detergents only.

Maintaining laminate surfaces

The colourful surfaces of Woodi products are manufactured from durable, high-pressure laminate using modern materials and machinery. We guarantee that the products will meet your expectations whether you use them in dining rooms or play areas.

Hot objects on laminate surfaces

Boiling water or hot food will not damage laminate surfaces. However, a burning cigarette, hot iron or oven hot plates or pots can damage them.

Moisture

Water is not harmful to laminate surfaces, but it can damage the core material of tabletops. For this reason it is important to remove water from surfaces to prevent the water from absorbing into the material through seams.

Scratches

Normal cooking containers and dishes will not damage laminate surfaces. However, if you cut or scratch the laminate surface with a knife, the surface may be at risk of damage. Please use cutting boards when using knives and other sharp objects.

Cleaning

Clean laminate surfaces with water and mild detergent. Persistent stains can be removed by using non-abrasive fluid detergent and a soft brush. Our laminate surfaces will withstand most chemicals normally used in homes, including those that contain alcohol or cosmetic materials. Some chemicals or strong colour agents may damage the surface. Remove beetroot juice, juice concentrates, colour agents, chemicals, strong bleach or detergents immediately from laminate surfaces.

Experiences with furniture tendering

“The new kindergarten in Alajärvi was completed in July 2017. We started the planning process for freestanding furniture early on and got to know the different methods used in the competitive tendering process. At an early stage, we decided to use the “French competitive tendering” model. We specified the sum available to be used for the freestanding furniture and through the tendering process we got the opportunity to choose the most suitable furniture plan from different complete plans.

Woodi Oy from Kuopio was chosen as the winner for the freestanding furniture tendering process. The furniture plan presented by Woodi was distinctive and it fulfilled the invitation for tender criteria. It also made it clear that the company had an understanding of everyday life in early childhood education.

After the tendering process ended, everything ran smoothly. We went over the plans and the details together and made the necessary alterations and adjustments. We also agreed on the day of delivery, and when it arrived, the furniture was delivered and assembled in its correct place. The experience was really positive and the final results were exactly what we wished for.”

Hanna Luoma-aho

The early childhood education manager for the City of Alajärvi, Finland

We can help with planning

We are happy to assist our clients with furnishing projects, from individual spaces to whole buildings. We execute the plan according to the wishes and the budget of the client, using our many years of experience.

The right furniture makes a working environment ergonomic, functional, safe, and at the same time cosy. We help to choose colours and finishing materials for each project so that the furnishings are harmonious with the architecture of the building without overlooking usability and comfort. To support our design work we can produce 2D and 3D visualisations and room cards, which will help to demonstrate the final look.

Our product collection is constantly evolving and we can fit the furniture in each location cost-effectively, at all times considering high quality, durability and aesthetics. If you cannot find suitable furniture from our collection, please don't hesitate to contact our sales team about the different options available.

Basic space planning

Our basic space-planning package is available to order, and it will be included in the price of the furnishing project. The package will include space planning in terms of tables, chairs, storage units, sofas, armchairs and other freestanding furniture.

Additional space planning

Our chargeable additional space-planning package is customised according to customer's wishes and budget. This package may include a plan for curtains, carpets, lamps, acoustics and a complete colour scheme for the furniture.

Children's Day Award 2000

Kuopion Woodi Oy received an acknowledgement for their work to improve the environment for children from the Ministry of Education and Culture in 2000.

Ministry of Education and Culture
Opetus- ja kulttuuriministeriö Undervisnings- och kulturministeriet

Entrepreneurial Award 2011

The Federation of Finnish Enterprises in Eastern Finland awarded Kuopion Woodi Oy with the Entrepreneurial Prize in 2011.

Trustworthy Partner

Kuopion Woodi has received Suomen Asiakastieto's Rating Alfa AA+ classification, which means that Kuopion Woodi is a reliable partner. Only 10% of Finnish companies have received this classification.

Furniture testing

Kuopion Woodi furniture collections are tested according to standards SFS-EN 747-1, SFS-EN 747-2, SFS-EN 716-1, SFS-EN 16139, SFS-EN 15373, SFS-EN 1129-1, ISO 7173, ISO 7174-1, UNI EN 1022/98, ENV 1729-2/01, ENV 12520/2000 and EN 1728/2000.

Guarantee

All our furniture is guaranteed for five years, with the exception of bean bags, soft furnishings and floor cushions, which have a guarantee of one year. The guarantee covers material and production errors. Natural wear and damage that has resulted from unconventional use is not included in the guarantee. We also guarantee the future availability of our collections for at least ten years. Our oldest models date from 1994 and are still in production.

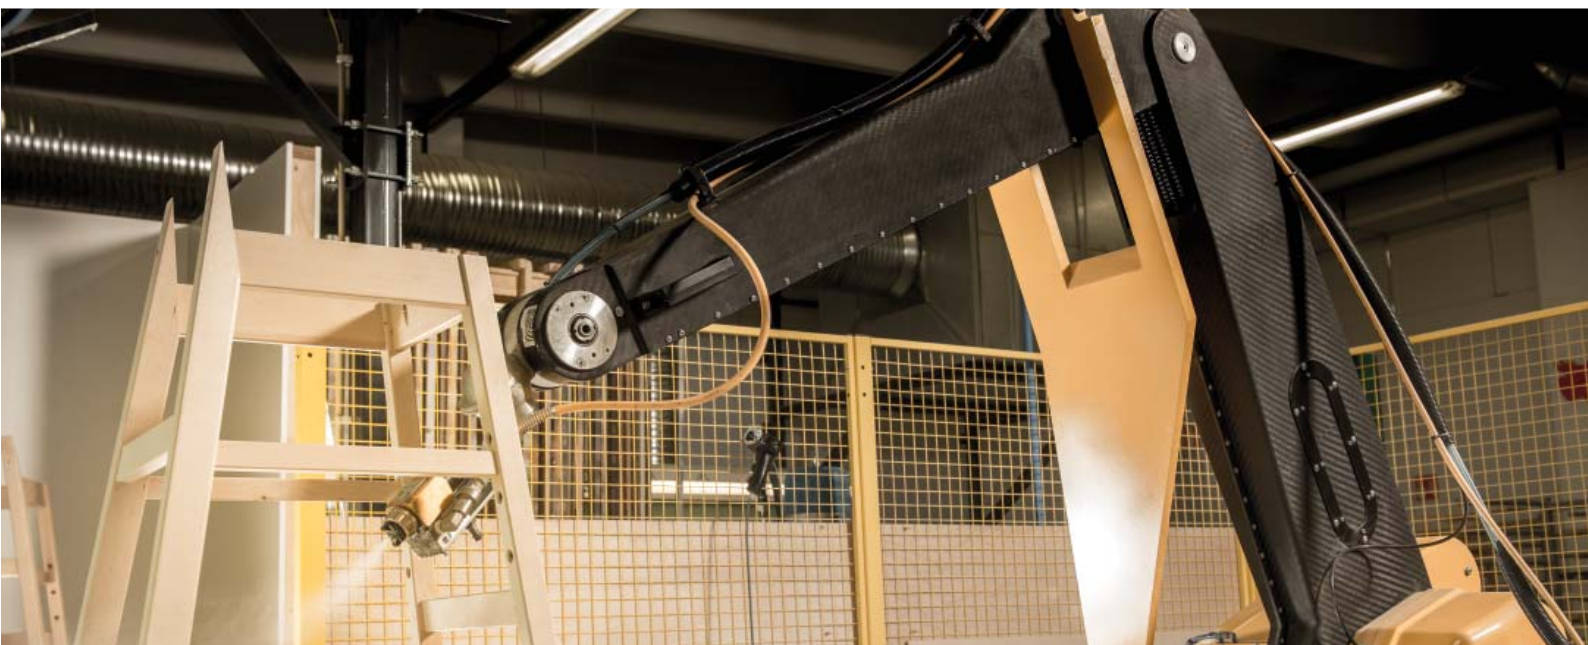

Company operations

We apply the ISO 9001 quality management system to our operations. The quality management system acts as an important tool in the continuous customer-oriented development of our products. Our customers see our quality management system as a reliable, trustworthy and eligible system.

Environment

We apply the ISO 14001 environmental standard to our operations. Our products are produced from environmentally friendly materials with environmental friendly technologies. Products that are at the end of their life cycle can be safely recycled or disposed of. During the production process, we strive to decrease the amount of waste materials and enhance the recycling and reuse of them.

For people

~ naturally durable

Kuopion Woodi – a Finnish furniture manufacturer

Kuopion Woodi products are produced in a factory located in Kuopio, Finland. From the beginning, Kuopion Woodi has invested in the automatization of production and today Woodi is one of the most modern furniture factories in Finland. For our customers this means competitive prices and constant high quality.

Approximately 50 professionals from the wood industry work at Kuopion Woodi. We cooperate constantly with local schools, and most of our employees are young people at the start of their working lives. Many of our employees worked at Kuopion Woodi during their school internship. We want to maintain Finnish furniture manufacturing skills and to offer work for Finnish people in Finland.

Kuopion Woodi has been furnishing public spaces for over 20 years. Our collection offers a variety of products for public spaces, and especially for kindergartens, schools and retirement homes. The frame material of the products is high-quality solid birch and high-pressure laminate is used as an enhancement to bring colour, durability and character to the furniture. The furniture of Kuopion Woodi is designed to support the daily activities of our customers and to withstand hard use over a long period.
